Title: Visualization 2 FDS

Author: Jastej Singh Gill

Date: 16/9/2024

Sheet: 01

Datasets Grouped by State
(2007-2022)

Normalised with population
by State

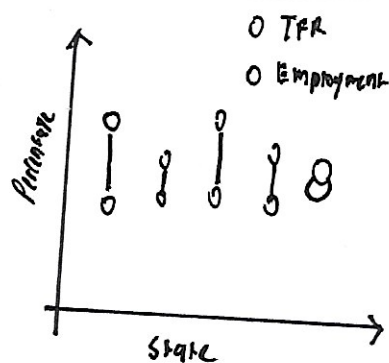

Household Income
— mean-income (average monthly household income)
— median-income (median gross monthly income)

Poverty Rate
— poverty-absolute (proportion below PLZ)
— poverty-hardcore (proportion below FPLZ)
— relative poverty Rate (income below median state income)

Total Fertility Rate (TFR)
(yearly)
— Fine correlation with TFR, study trends
— Identify need for change, demographic change
— Need for new policies, economic development
labour force size (Employed + unemployed)

Employment Rate by Sex
— labour force employed
— labour force unemployed
— unemployment rate (unemployed : labour force size)
— employment ratio (employed : working age population)

Charts

Filter

① Total Fertility Rate by State

② Combining all attributes

③ Household income + Poverty Rate

④ Employment rate + TFR

Context & Refine

Questions
— Does this show a trend of employment rate or TFR?
— How to find & show correlation between poverty & TFR?
— Does this show poverty & income in each state to suggest comparisons?

Title: Visualization 2 FDS

Author: Jasjeet Singh Gill

Date: 16/11/2024

Sheet: 02

Operation

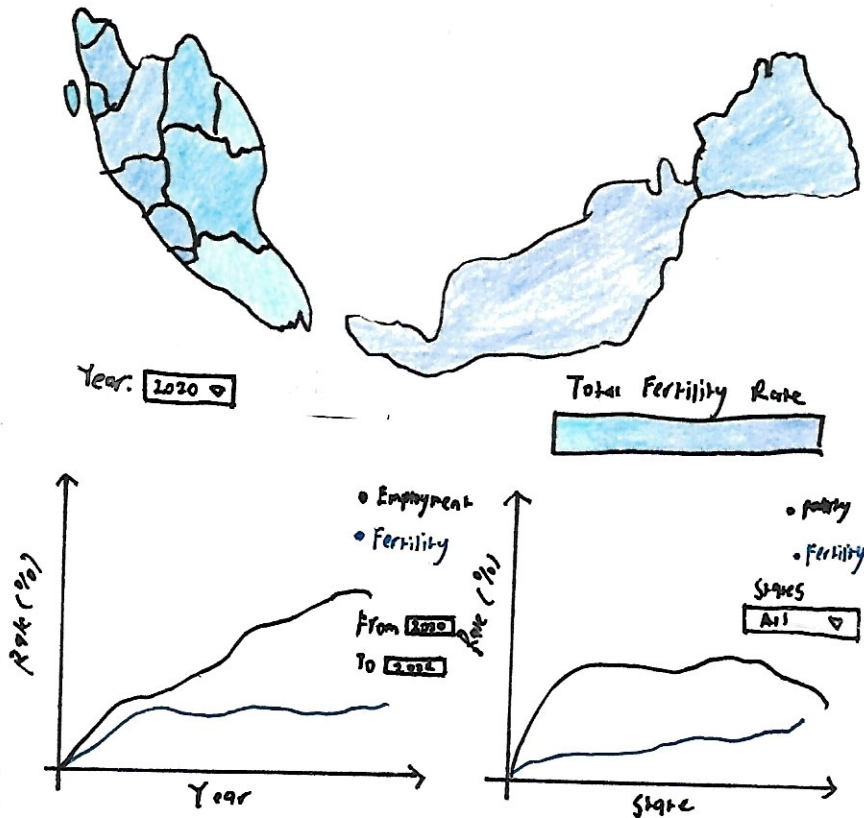

- Map is a choropleth map used to show the Fertility rate of each state using TFR which is normalised to the population number
- User can select year to display TFR which will allow them to view changes over time and draw comparison between states
- User can select which states to include in poverty and fertility line chart to display poverty and fertility in specific states
- Employment and fertility rate against time shows data combining all states to highlight correlation between the two which can be filtered by selecting year range

Positives (+)

- User can customise Visualization by selecting year, year range & state
- Map tooltip allow user to view statistics for each state
- Rate (%) against year show direct correlation between employment & fertility

Negatives (-)

- Rate (%) against state can be better visualized with a map chart
- More insight can be added by including household income statistics
- Line chart may not be the most effective to compare employment & fertility rates

Title: Visualization 2 PDS

Author: Jasraj Singh Gill

Date: 17/08/2024

Sheet: 03

Operation

- Choropleth map used to display poverty rate across different states
- Bubble size is used to represent the median income of each state
- Lollipop chart is used to show direct comparison between fertility and employment rates to showcase their relationship
- Tooltip for each state shows exact poverty rate, median income and population
- User can select Year and state in map and lollipop chart respectively

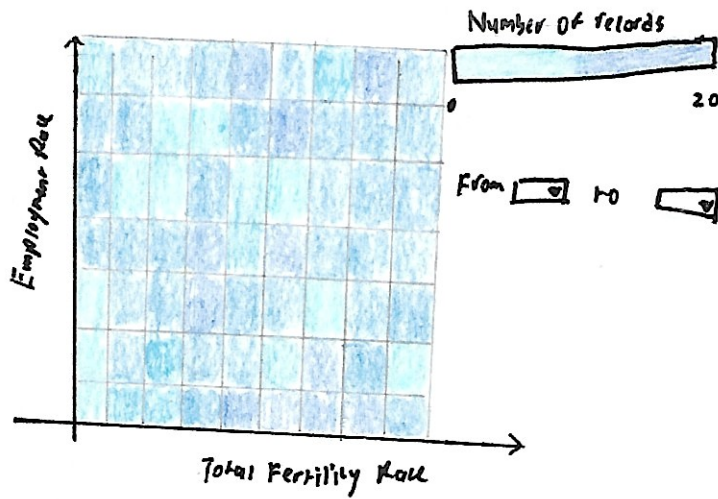

Positives (+)

- Lollipop Shows direct comparison between fertility and employment rates to see how one attribute affects another
- Bubble size indicates median income to allow map to facilitate comparison of median income between states
- User can customise state & year

Negatives (-)

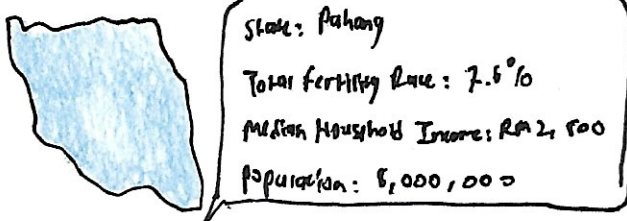

- Bubble colour is not used and can be added to convey additional information

Title: Visualization 2 FDS

Author: Jasje Singh Gill

Date: 17/10/2024

Sheet: 04

Operation

- Histogram heatmap show number of state entries for each cell
- User can select specific range of years to display records
- Bubbles on map are equally sized
- Colour of bubble & map show household income and the fertility rate respectively
- User can select year to display data

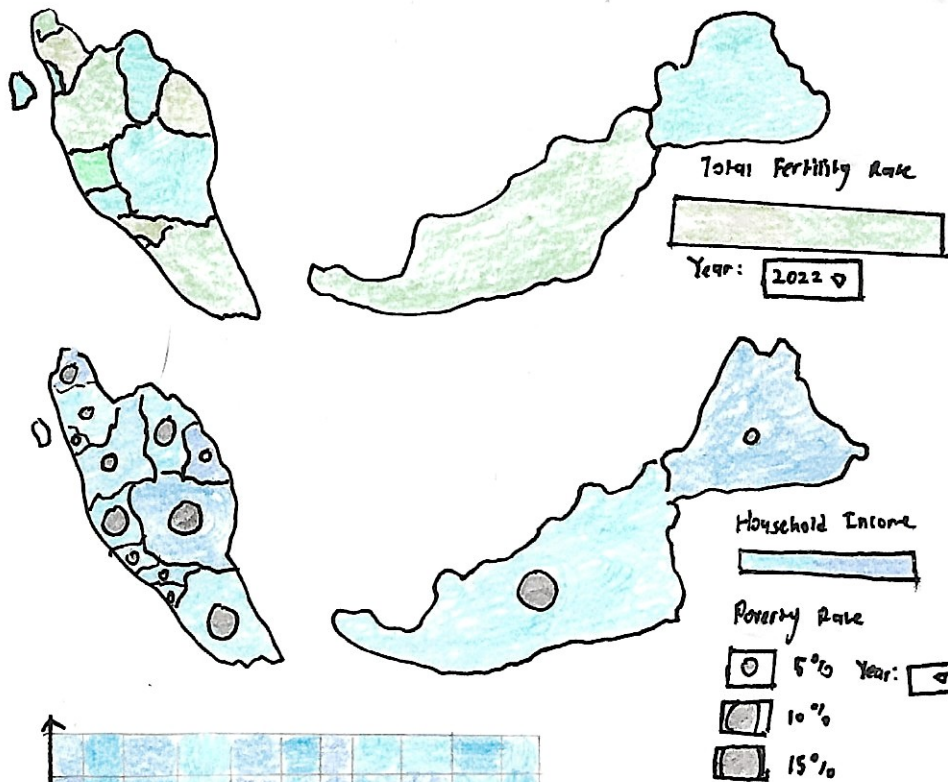

Positives (+)

- Correlation between total fertility rate and employment rate are effectively highlighted using 2D histogram heatmap with colour representing number of state entries
- Colour on bubbles effectively contrast with colour on map to facilitate comparison
- User can customise years to view

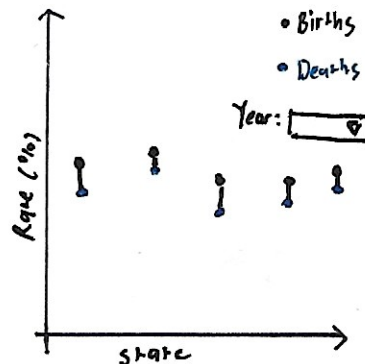

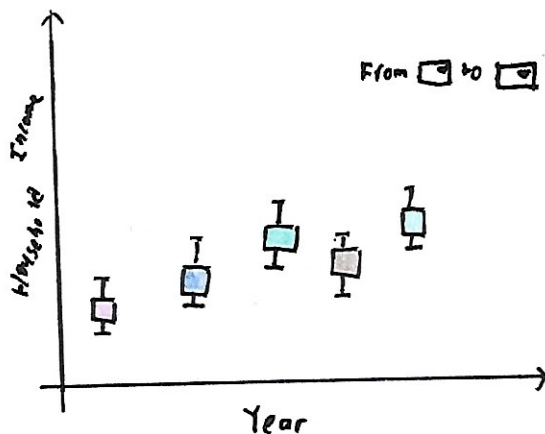

Negatives (-)

- Poverty rate is not visualized
- Lack of contrast between bubble & map colour can cause confusion

Title: Visualization 2 FDS

Author: Jasraj Singh Gill

Date: 19/9/2024

Sheet: 05

Operation

- First map is a choropleth using color hue to show difference in fertility rates across states
- Second map is also choropleth to show household income disparity, with poverty rates highlighted using bubble sizes
- 2D histogram heatmap shows correlation between employment & fertility
- Box plot shows the change in household income over the years
- Lollipop chart shows disparity between number of deaths & live births in each state
- Year (specific / range) can be adjusted in each chart
